PERSONAL PROJECTS

Insurance Management System (09/2023 - Present)

- Led the development of a robust insurance management system catering to cattle coverage.
- The software, designed for an insurance company, enables seamless data entry, editing, and dynamic PDF generation for Health Certificates.
- Notable features include an image gallery for visual identification and secure email integration for efficient communication with claim companies.
- The project optimizes workflow, enhances data security, and contributes to streamlined cattle insurance processes, showcasing my expertise in full-stack development with PHP, MySQL, and JavaScript.

Auto SEO Hub: Simplified Website Management (01/2023 - 07/2023)

- "Auto SEO Panel" is an advanced website management system leveraging cutting-edge technology.
- This platform streamlines website content management through an intuitive interface, allowing users to effortlessly add, edit, and delete content using ready-made templates.
- With an extensive library of templates, users can create professional websites without design complexities.
- The system excels in SEO optimization, enabling users to add unlimited keywords for blogs and products.
- Powered by robust technologies such as PHP and MySQL, Auto SEO Panel ensures a seamless and efficient website management experience, making it an essential tool for enhancing online visibility and digital presence.
