SUMMARY

Motivated Entry-Level Full Stack Developer with foundational knowledge in the MERN (MongoDB, Express.js, React.js, Node.js) stack. Eager to apply front-end and back-end development skills to create efficient and user-friendly web applications. Known for being a quick learner, adaptable, and highly collaborative, I am committed to contributing to team success and assisting wherever needed to support project goals. Ready to grow professionally while helping the company succeed by delivering value through continuous learning and improvement.

KEY COMPETENCIES

HTML	MongoDB	Adaptability
CSS	ReactJS	Attention to details
JavaScript	ExpressJS	Good Communication

PROJECTS

CMS
Content Management System based on MERN Stack
A full-stack content management system (CMS) built with the MERN stack (MongoDB, Express.js, React.js, Node.js). Features user authentication, blog creation, image upload, and profile management. Implements JWT for secure access and Bootstrap for a responsive design. Users can register, login, create blogs, and update profile information.

StateCounter
A Click based counter with Reactjs States
This Counter Program is a simple yet functional web application built with React.js, designed to help beginners understand the fundamentals of React's component-based architecture and state management. The project showcases how to use React's useState hook to create dynamic, interactive user interfaces.

Business Website
Royal Enfield Inspired website based on ReactJS and React-Bootstrap
A motor bike company website frontend design inpired by reactjs and react-bootstrap. Major design elements are inspired by Royal Enfield website, some design elements are assumed or self made. It is a multipage website.
